DISTEC's Outlook to VISCOM Europe 2007

DISTEC unveils first optical bonded 70" display for outdoor use and a new 6-sheet City Light with energy saving illumination

DISTEC will show the latest developments for the Out-of-Home media industry at VISCOM show in Düsseldorf on September 20th - 22nd.

The first 70" LCD panel with optical bonded anti-reflective glass layer has been successfully finished!

It has sunlight readability, a vandalism proved and maintenance friendly housing and it is furthermore equipped with ambient light control.

The inbuilt media-player allows wireless access for network content management.

Another highlight will be the double-sided 6-sheet box (City Light) operated by high power LED's.

95 watts power consumption combined with a special reflector system do not only stand for even illumination but also for DISTEC's ambitious approach to develop more and more energy saving and low-maintenance technologies to enhance our product portfolio.

Come and join us at our booths I20 and J20 in hall 8b!

We are very much looking forward to meeting you in Düsseldorf!

Pictures will of course be available on our website after the show!
